AMENDMENT UNDER 37 C.F.R. § 1.116 Attorney Docket No.: Q91408

Appln. No.: 10/559,808

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the

application:

LISTING OF CLAIMS:

1. - 11. cancel

12. (currently amended): Method for continuous direct casting of a metal strip according

to which said strip is cast by solidification of liquid metal in an ingot mould with cooled, moving

walls, said strip is then given in-line hot rolling, wherein a product is applied to the surface of

the strip as it exits the ingot mould, which leaves a lubricant layer on said surface subsisting

during the time the strip is hot rolled and causing release of gases contributing towards the

protection of said surface from oxidation,

wherein the strip is 1-10 mm thick.

13. (previously presented): Method as in claim 12, wherein said lubricant layer is a

carbonaceous material.

14. (previously presented): Method as in claim 13, wherein said product leaving a

lubricant layer to subsist is graphite.

15. (previously presented): Method as in claim 13, wherein said product leaving a

lubricant layer to subsist is a grease containing calcium carbonate.

2

AMENDMENT UNDER 37 C.F.R. § 1.116 Attorney Docket No.: Q91408

Appln. No.: 10/559,808

16. (previously presented): Method as in claim 13, wherein said product leaving a

lubricant layer to subsist is acetylene.

17. (previously presented): Method as in claim 12, wherein hot rolling is conducted with

a reduction rate of at least 50%.

18. (previously presented): Method as in claim 12, wherein said liquid metal is a ferrous

alloy.

19. (currently amended): Plant for the continuous direct casting of a thin metal strip, of

the type comprising an ingot mould with cooled, moving walls in which solidification of said

strip occurs, and an in-line hot rolling unit for said solidified strip, wherein it comprises means

for applying a product to the surface of said strip as it exits the ingot mould which leaves a

lubricant layer subsisting on said surface as it enters the hot rolling unit,

wherein said strip is 1-10 mm thick.

20. (previously presented): Plant as in claim 19, wherein said moving walls are the side

walls of two rolls rotating in opposite directions.

21. (previously presented): Plant as in claim 19, wherein said moving walls are two

moving belts.

3

AMENDMENT UNDER 37 C.F.R. § 1.116 Attorney Docket No.: Q91408

Appln. No.: 10/559,808

22. (previously presented): Plant as in claim 19, comprising an inertization chamber for said strip between its exit from the ingot mould and its entry into the hot rolling unit.
